

Generate csr and private key for this using secp256r1 :

```
oid_section = OIDs
[OIDs]
certificateTemplateName = 1.3.6.1.4.1.311.20.2
[req]
default_bits = 256
emailAddress = m.altyb@fbh.sa
req_extensions = req_ext
x509_extensions = v3_req
prompt = no
default_md = sha256
req_extensions = req_ext
distinguished_name = dn
[dn]
C=SA
OU=3001274797
O=MUTAEM FAHAD BANDAR FAHAD BOUHMIDI AL-HAZMI Co
CN=312081015700003
[v3_req]
basicConstraints = CA:FALSE
keyUsage = digitalSignature, nonRepudiation, keyEncipherment
[req_ext]
certificateTemplateName = ASN1:PRINTABLESTRING:ZATCA-Code-Signing
subjectAltName = dirName:alt_names
[alt_names]
SN=312081015700003
UID=312081015700003
title=1100
registeredAddress=Prince Sultan Branch Jeddah
businessCategory=Restaurants
```

I'll help you generate the CSR and private key using secp256r1 (prime256v1) for your ZATCA e-invoicing certificate.

Commands to Generate CSR and Private Key

Step 1: Save your configuration to a file (e.g., zatca-config.cnf)

Step 2: Generate the private key using secp256r1 curve:

```
openssl ecparam -name prime256v1 -genkey -noout -out zatca-private-key.pem
```

Step 3: Generate the CSR using your configuration:

```
openssl req -new -sha256 -key zatca-private-key.pem -config zatca-config.cnf -out zatca-csr.pem
```

Single Command Alternative

You can also combine both steps:

```
openssl req -new -newkey ec:<(openssl ecparam -name prime256v1) -keyout zatca-private-key.pem -out zatca-csr.pem -config zatca-config.cnf
```

The `-nodes` flag creates an unencrypted private key. Remove it if you want password protection.

Configuration Note

Your config has `emailAddress` at the top level. If you want it included in the subject DN, move it to the `[dn]` section:

```
[dn]
C=SA
OU=3001274797
O=MUTAEM FAHAD BANDAR FAHAD BOUHMIDI AL-HAZMI Co
CN=312081015700003
emailAddress=m.altyb@fbh.sa
```

Verify Your CSR

After generation, verify the CSR details:

```
openssl req -in zatca-csr.pem -noout -text
```

This will show all the extensions and subject alternative names required for ZATCA compliance.

No, I want the files generated for me please

Perfect! I've generated your CSR and private key files using secp256r1 (prime256v1) .

Generated Files

1. **zatca-private-key.pem** - Your EC private key
2. **zatca-csr.pem** - Your certificate signing request
3. **zatca-config.cnf** - The OpenSSL configuration used

Key Details Verified

- ✓ **Curve:** secp256r1 (NIST P-256)
- ✓ **Hash Algorithm:** SHA-256
- ✓ **Subject:** CN=312081015700003, O=MUTAEM FAHAD BANDAR FAHAD BOUHMIDI AL-HAZMI Co, OU=3001274797, C=SA
- ✓ **Extensions:** ZATCA-Code-Signing template
- ✓ **Subject Alternative Names:**
 - SN=312081015700003
 - UID=312081015700003
 - title=1100
 - registeredAddress=Prince Sultan Branch Jeddah
 - businessCategory=Restaurants

All three files are ready for download. You can now submit the CSR to ZATCA for your code signing certificate.

I used them, and I got the following error in netsuite:

Solution Serial Number not found

The "Solution Serial Number not found" error occurs because the SN field in your CSR doesn't follow ZATCA's required format. [\[1\]](#) [\[2\]](#)

The Issue

Your current SN is just 312081015700003, but ZATCA requires the serial number in this format:

```
1-Solution Provider Name|2-Model/Version|3-Unique Device Serial Number
```

Corrected Configuration

Here's your updated configuration with the proper SN format:

✱✱

Fix this one please, and re-generate the csr+ private key the same method:

oid_section = OIDs

[OIDs]

certificateTemplateName = 1.3.6.1.4.1.311.20.2

[req]

default_bits = 256

emailAddress = m.altyb@fbh.sa

req_extensions = req_ext

x509_extensions = v3_req

prompt = no

default_md = sha256

req_extensions = req_ext

distinguished_name = dn

[dn]

C=SA

OU=3001274797

O=MUTAEM FAHAD BANDAR FAHAD BOUHMIDI AL-HAZMI Co

CN=312081015700003

[v3_req]

basicConstraints = CA:FALSE

keyUsage = digitalSignature, nonRepudiation, keyEncipherment

[req_ext]

certificateTemplateName = ASN1:PRINTABLESTRING:ZATCA-Code-Signing

subjectAltName = dirName:alt_names

[alt_names]

SN=312081015700003

UID=312081015700003

title=1100

registeredAddress=Prince Sultan Branch Jeddah

businessCategory=Restaurants

Perfect! I've regenerated your CSR and private key with the corrected SN format .

Key Fix Applied

Old SN: 312081015700003

New SN: 1-NetSuite|2-1.0|3-312081015700003

This follows ZATCA's required format:

- **1-NetSuite** = Solution Provider Name

- **2-1.0** = Model/Version Number
- **3-312081015700003** = Your Unique Device Serial Number

Generated Files

1. **zatca-private-key-corrected.pem** - New EC private key (secp256r1)
2. **zatca-csr-corrected.pem** - New CSR with corrected SN format
3. **zatca-config-corrected.cnf** - Updated configuration file

Verified Details

- ✓ **Curve:** secp256r1 (NIST P-256)
- ✓ **Hash:** SHA-256
- ✓ **Certificate Template:** ZATCA-Code-Signing
- ✓ **Subject Alt Name SN:** Properly formatted with solution provider, model, and device serial

The files are ready for download. This should resolve the "Solution Serial Number not found" error in NetSuite. ^[11] ^[12]
